T_BVEDXPF_1119_EN - HFC R410A

BVE DX-PF-E

12-156 kW

Air cooled condensers for IT Cooling with plug fans.
Indoor installation.

The picture of the unit is indicative and may vary depending on the model

- Operation with outdoor temperature up to 50°C
- Possibility of ducting air intake and exhaust
- For indoor installation or sheltered from atmospheric agents

- Condensing coil in copper tubes and finned aluminium pack
- Plug fans with EC electric motor
- Refrigerant R410A

GENERAL CHARACTERISTICS

Air cooled condenser for IT Cooling with plug fans and horizontal air flow.
Air flow from coil to fan.
Condenser are supplied with seal charge; the refrigerant charge must be carried out.
Frame for outdoor installation.
The constructive solutions allow high application flexibility.
14 models with capacity from 12 to 156 kW.
The series has an independent power supply from the indoor unit.
Among the indoor unit and the condenser is necessary the refrigerant connection and electrical connection of the condensing proportional control signal and the alarms.

PRODUCT FEATURES AND BENEFITS

- Suitable for any type of plant
- Independent power supply from the indoor unit;
- Horizontal air flow – from coil to fan.
- Vertical air flow (by moving a panel).
- 3 sound levels and quiet operation particularly suitable for applications in urban areas.
- Operating life of the project exceeding 10 years

F-GAS DIRECTIVE

The units highlighted in this publication contain <HFC R410A [GWP₁₀₀ 2088]> fluorinated greenhouse gases.

WORKING LIMITS

AMBIENT AIR TEMPERATURE	
50°C	Maximum ambient air temperature
POWER SUPPLY	
± 10%	Maximum tolerance of the supply voltage (V)
± 2%	Maximum unbalancing of the phases.

TRANSPORT AND STORAGE TEMPERATURE

During transport and if the machine is not installed at the reception, do not remove the packaging and place the machine in an enclosed, dry and protected from sunlight site at temperatures ranging between -30°C and 50°C in absence of superficial condensation.

MODEL IDENTIFICATION

BVE DX-PF-E STD T 14	
BVE DX	Air cooled condenser
PF	Plug fan
-E	Fans with EC electric motor
STD	Sound level STD – standard LNO – low noise (Nominal air flow at 85%) ELN - extremely low noise (Nominal air flow at 70%)
T	Power supply T – Three-phases
14	Capacity (kW)

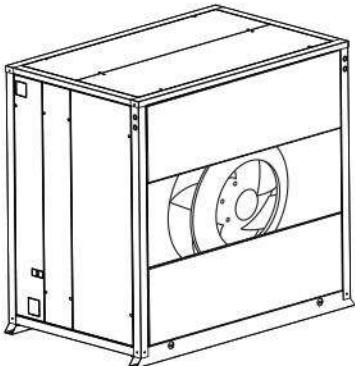

AVAILABLE SERIES

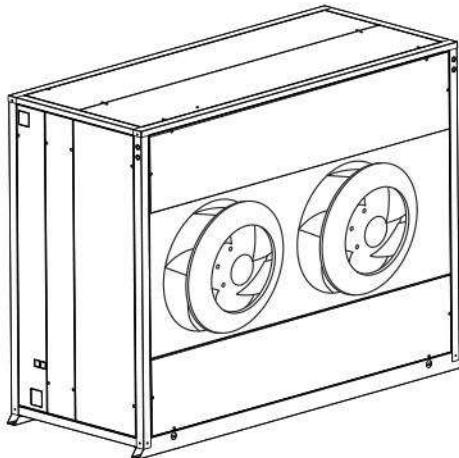

BVE DX-PF-E STD	Remote condenser equipped with EC fan Standard acoustic version Power supply 380-400V / 3Ph / 50Hz
BVE DX-PF-E LNO	Remote condenser equipped with EC fan Low noise acoustic version Power supply 380-400V / 3Ph / 50Hz
BVE DX-PF-E ELN	Remote condenser equipped with EC fan Extremely low noise acoustic version Power supply 380-400V / 3Ph / 50Hz

AVAILABLE MODELS

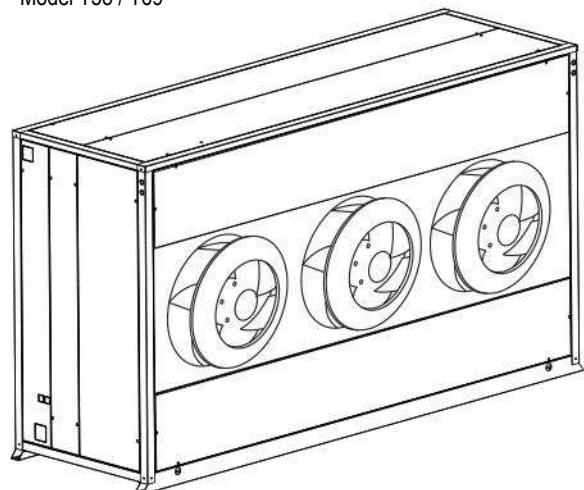

Model T11 / T14 / T17 / T21

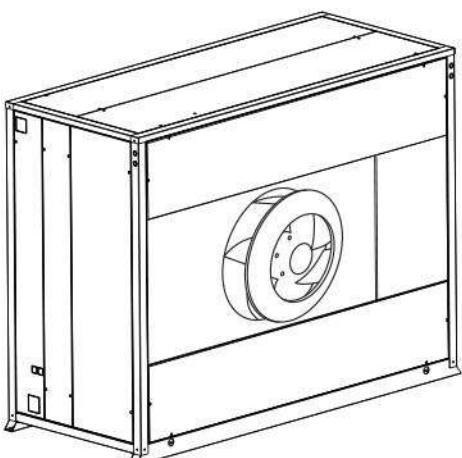

Model T58 / T69

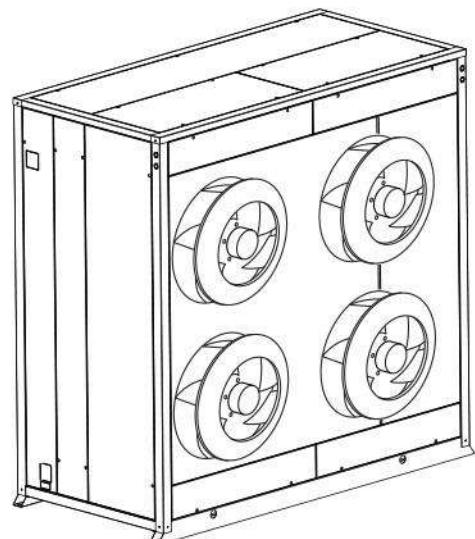

Model T24 / T33

Model T86 / T114

Model T38 / T44

Model T108 / T144

MAIN COMPONENTS

FRAMEWORK

- Base, self-supporting frame and panelling in steel plate with protective surfaces treatment in compliance with UNI ISO 9227/ASTMB117 and ISO 7253, and painted with epoxy powders.
- Colour: RAL 9002
- Removable panels.
- Lateral compartment for electrical panel with direct access to control and regulation devices;

FAN SECTION

- Centrifugal fans with backward curved blades with wing profile, single suction and without scroll housings (Plug-fans).
- EC electric motor with external rotor.
- Integrated motor thermal protection.
- Motor rotation speed control through a 0-10Vdc proportional signal.
- IP54 enclosure class.
- Rotation speed control with integrated controller

CONDENSING COIL

- Condensing coil in copper tubes and high efficiency aluminium fins, specifically developed to provide high heat transfer and lower pressure drops.
- The coil is supplied with seal charge.

REFRIGERANT CIRCUIT

- Service Schrader valve on refrigerant inlet pipe. The valve can be used for the emptying of the sealing charge, the creation of the vacuum and the refrigerant charge operation.
- Welding copper connection on the gas inlet and liquid outlet manifolds.
- Valves on gas and liquid line for coupling to refrigerant pipe. The valves are supplied in mounting kit.

ELECTRICAL PANEL

The electrical panel is positioned inside the condenser structure; remove the side panel to access. Electrical panel in accordance with EN60204-1 norms, suitable for outdoor installation complete with:

- Terminals for power supply:
 - power supply - the power supply is independent of the indoor unit.
 - 0-10Vdc signal for fan rotation speed control - to be connected to the indoor unit.
 - alarm signal of the fans - to be connected to the indoor unit.

1. Referred to condensing temperature at 50°C and outdoor air temperature at 35°C.

The units highlighted in this publication contain <HFC R410A [GWP₁₀₀ 2088]> fluorinated greenhouse gases.

ACOUSTIC DATA

The series is available in 3 versions:

Standard units – STD: Standard noise level. No air flow reduction

Low Noise units – LNO: Reduced noise level. Nominal air flow reduction at 85%.

Extremely low noise units – ELN: Extremely reduced noise level. Nominal air flow reduction at 70%.

WARNING:

In a closed room the noise produced by a sound source reaches the listener in two different ways:

- Directly
- Reflected from the surrounding walls, floor, ceiling, from furniture.

With the same sound source, the noise produced in a closed room is greater than that produced outdoors. In fact, the sound pressure level generated by the source, must be added to the one reflected from the room. Also, the shape of the room affects the sound.

It is pointed out that a reduction of air flow on the condenser coils causes a reduction in the capacity of the condenser and a greater energy engagement of the compressors.

1. Refrigerant charge required for the condenser operation only. Internal unit, connections pipes and optionals are excluded.

RECOMMENDED REFRIGERANT LINES

Diameter of the recommended refrigerant lines for connection to MEHITS S.p.A. air conditioners and referred to "EQUIVALENT LENGTH".

Please always refer to the "INSTALLATION DIAGRAM" to properly select all necessary components

Verify the need to use pressure limiting devices (safety valves) where not already provided for by Directive 2014/68 / EU.

Nominal diameter: Refrigerant connection of the indoor unit. In some cases, the diameter of the refrigerant lines may not correspond with the nominal diameter. This is completely normal. It is enough to provide a reduction fitting to adjust the diameter.

For equivalent lengths over 165ft / 50m, please contact the Manufacturer's Sales Office.

INSTALLATION DIAGRAM

WARNING

It is necessary to provide the refrigerant charge for the connection pipes and for the remote air-cooled condenser.

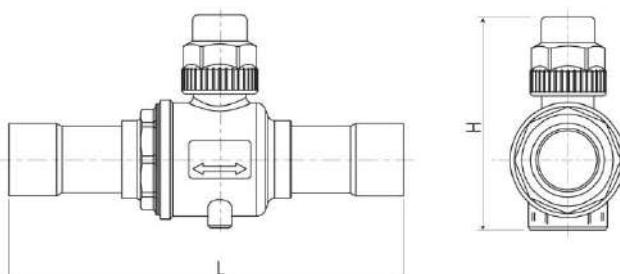

Charge refrigerant in the suitable quantity and lubricant oil in 10% ratio of charged refrigerant.

Lubricant oil must be the same type as the charged one as shown on the compressor plate.

STOP VALVES

Ball valves for refrigerant line. The valves are supplied in mounting kit.

CONDENSING CONTROL

Units with EC plug-fans and horizontal air flow.

The units are equipped with continuous variation of the rotation speed of the fan motor, for condensing pressure control according to the 0÷10V proportional signal coming from the internal unit microprocessor control.

The units with low noise emission LNO and ELN have the air flow rate reduced respect to the nominal one:

- LNO version: reduction at 85% of the nominal
- ELN version: reduction at 70% of the nominal

In severe operating conditions, such as with high ambient air temperatures, the condensing control system bypasses the set of limiting air flow to provide the condensing coil the maximum air flow. Clearly this logic does increase the noise level of the unit but guarantees the indoor unit operation.

POWER SUPPLY

The power supply is independent from the indoor unit.

The supply line must be equipped with all the protections and controls required by current regulations.

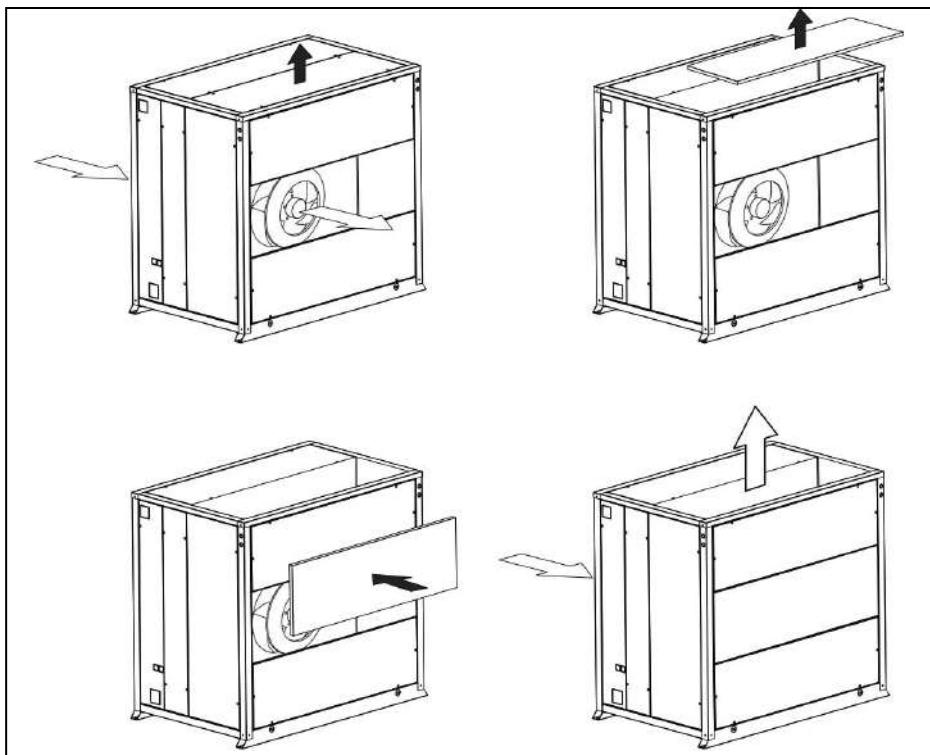

ELECTRICAL CONNECTION WITH THE INDOOR UNIT

The electrical connection with the indoor unit is provided by the installer.

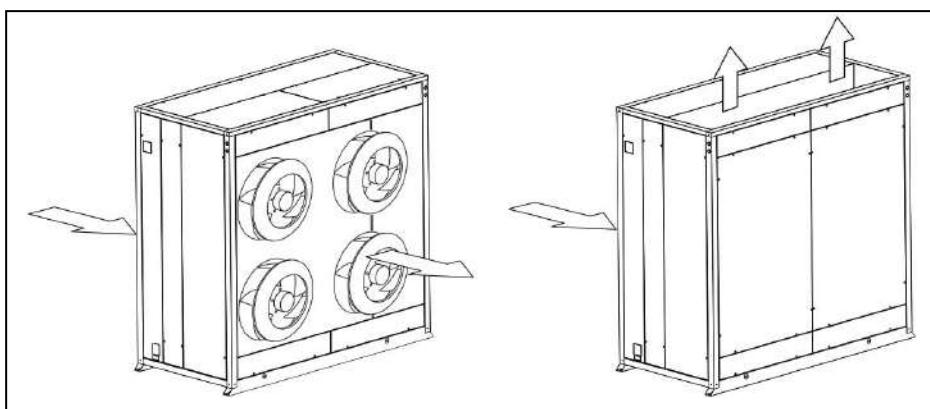

HORIZONTAL / VERTICAL AIR DELIVERY

To change air delivery mode, from vertical to horizontal air delivery:

- Remove the panel on the top of the unit;
- reposition the removed panel on the front of the unit.

For T108 and T144 models the air flow must be defined during the order phase.

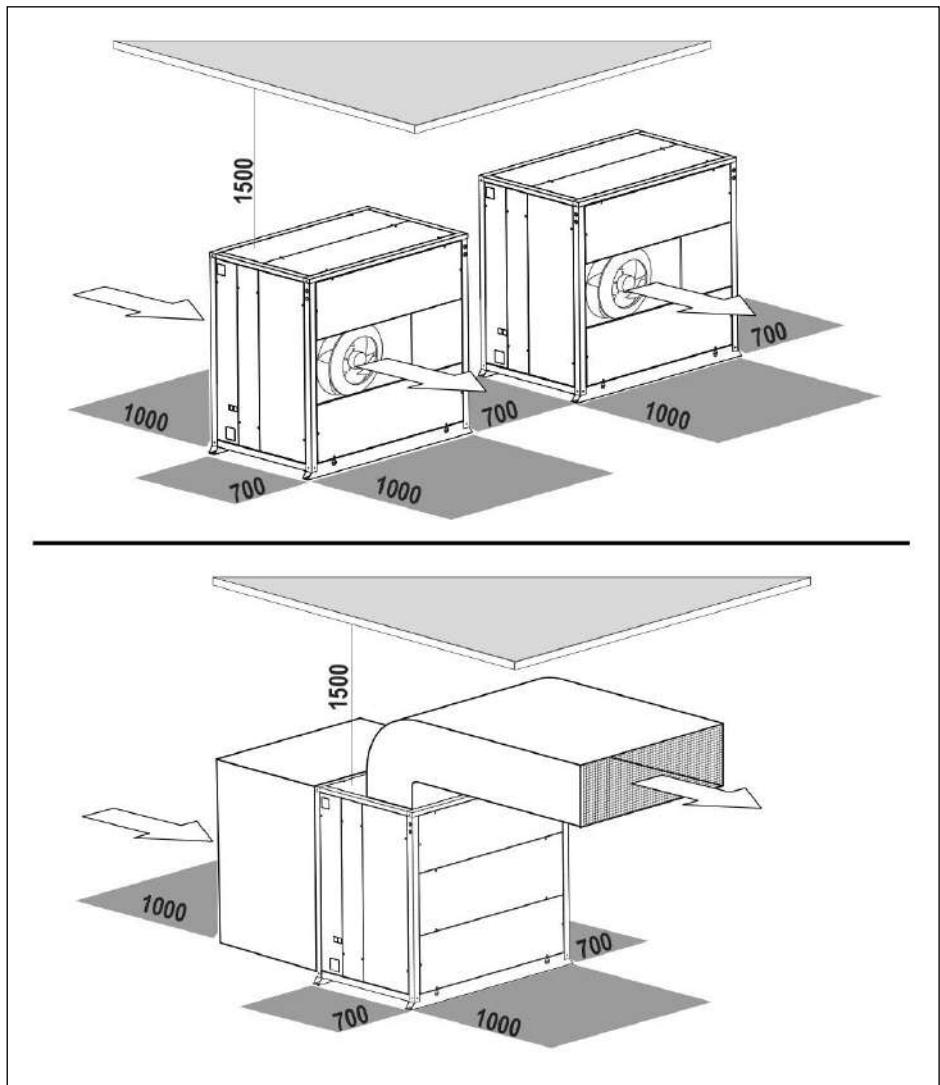

RECOMMENDATIONS FOR INSTALLATION

The machine must be placed in an access area only allowed for OPERATORS, MAINTENANCE TECHNICIAN and TECHNICIANS; otherwise it must be surrounded by a fenced perimeter placed at least two meters from the external surfaces of the machine.

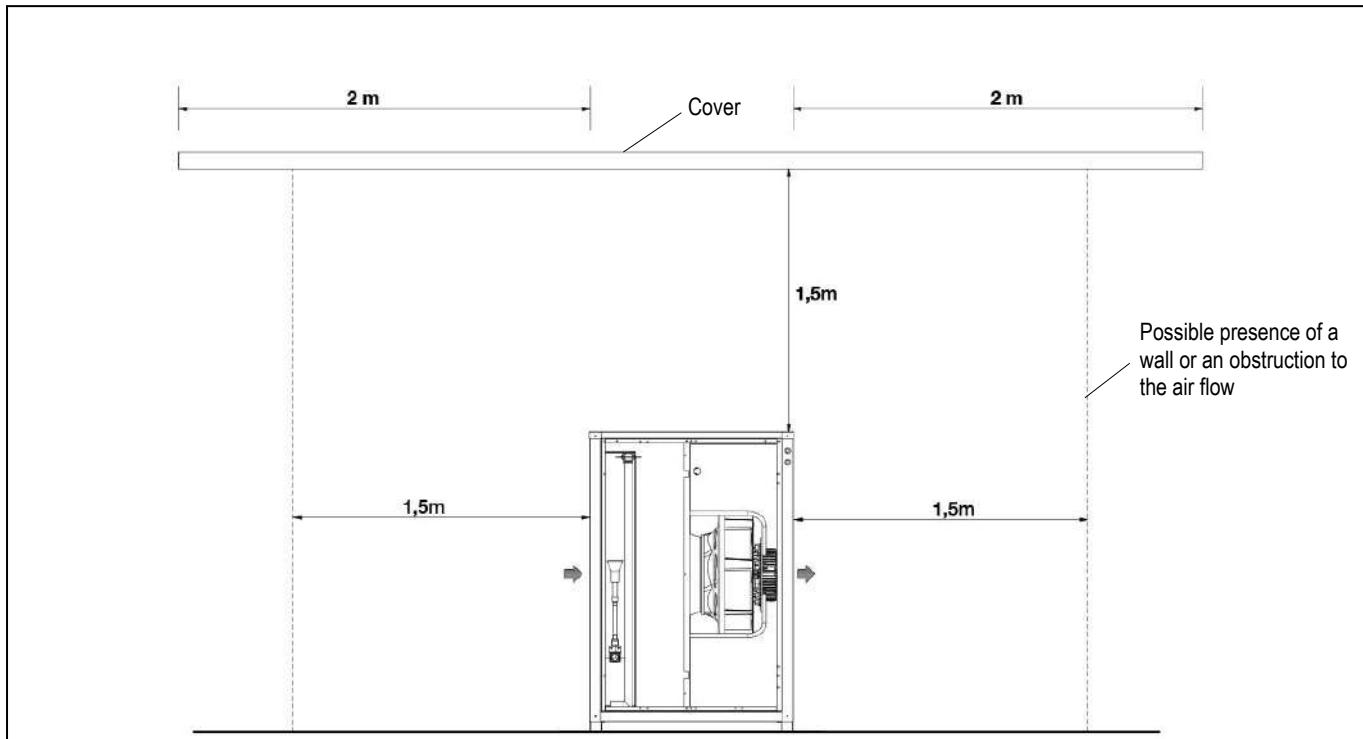

CLEARANCE SPACE

Ensure adequate clearance spaces as indicated in below.

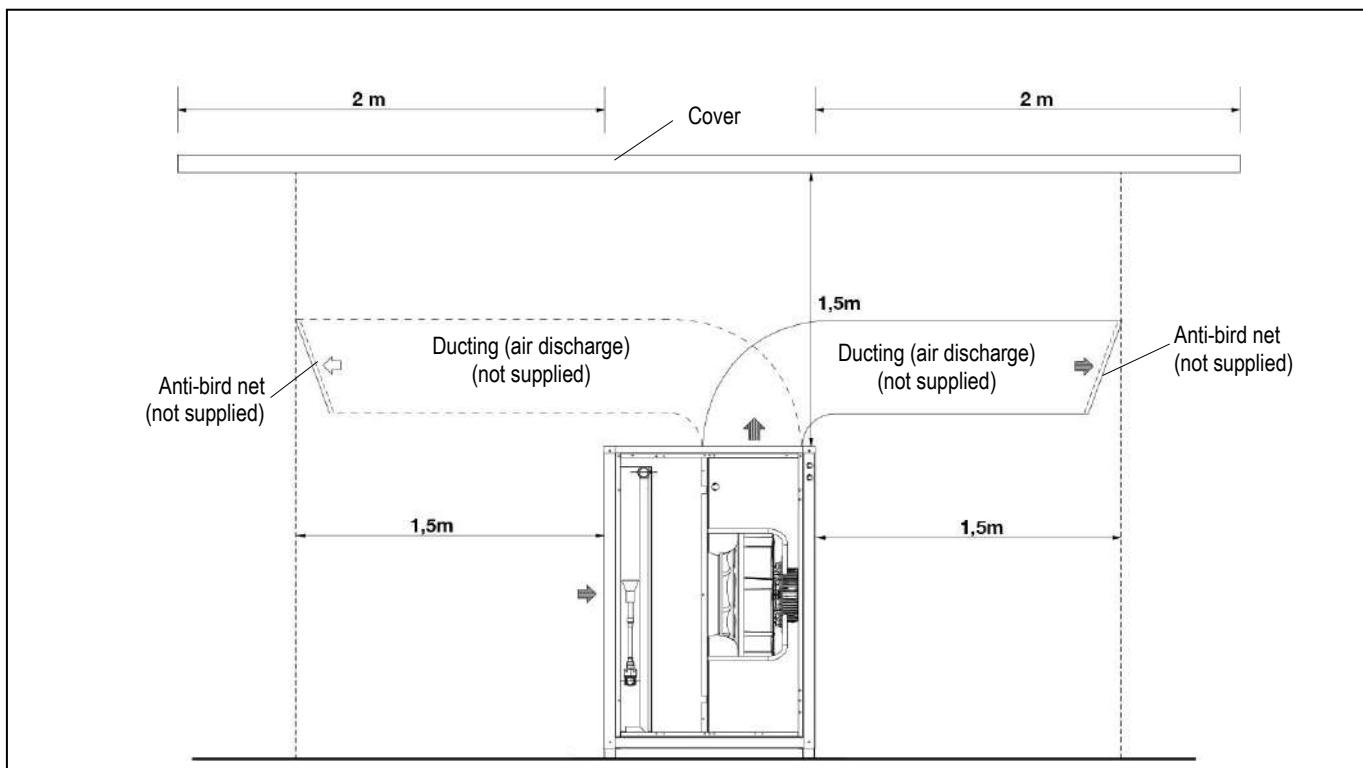

OUTDOOR INSTALLATION

The machine must be installed under a cover or anyway protected against atmospherics agent. The dimensions of the cover must consider the possibility of transversal rain, characterized by a higher inclination of the rainfall caused by the wind. Only the installations with horizontal air discharge flow are permitted without ducting.

In case of vertical air discharge, ducting is mandatory.

IMPORTANT

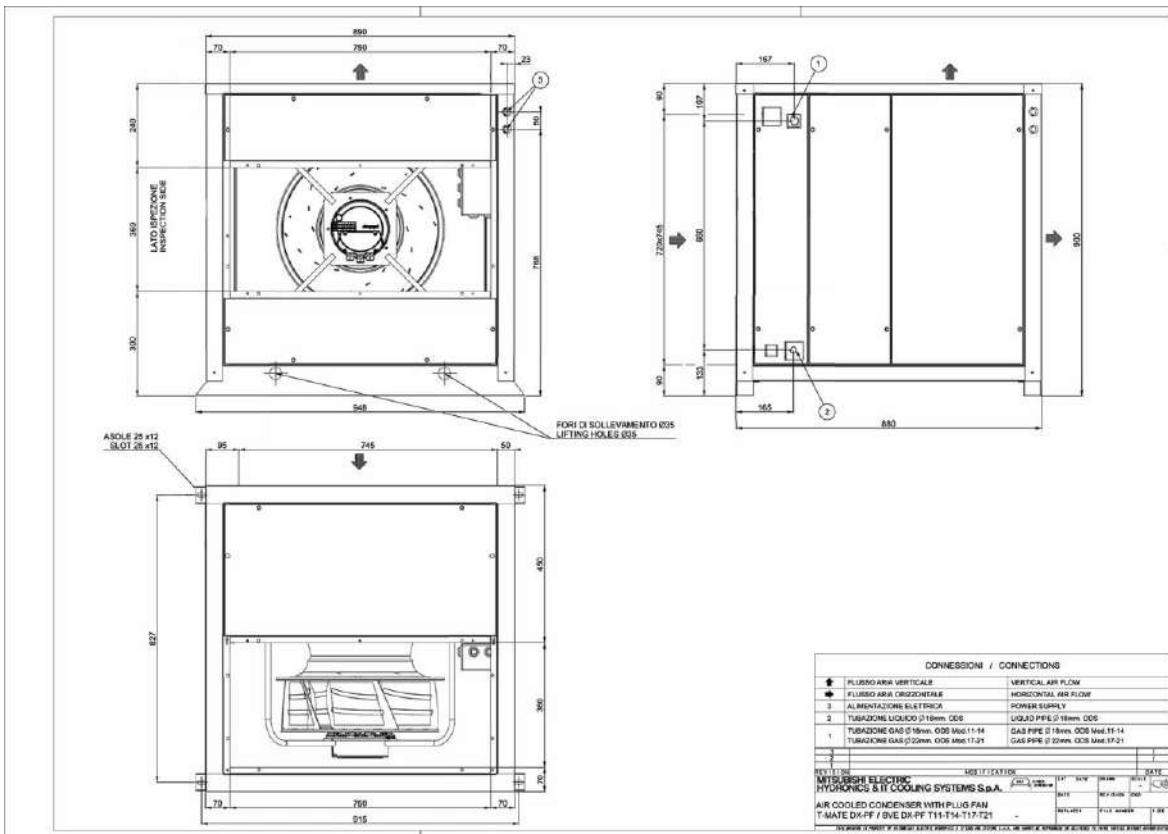

Plug fan must be protected from direct rain and atmospherics agents.

SHIPMENT: PACKING DIMENSIONS

Values referred to basic machine. The presence of some accessories increases the weight of machine.
The machines are shipped on pallet and covered with shrink wrap.
